

Solar Panel Protection

This New Kit makes Solar Panel Exclusion Fast, Easy and Attractive

Solar panels are being installed on commercial and residential roofs across America at an ever increasing rate. These arrays provide perfect harborage for birds and other critters, and homeowners are desperate for a solution.

The Problem - Pigeon droppings accumulate on roofs under solar arrays.

A fast and tidy installation. The attractive black mesh is locked in place by the Solar Panel Clips.

The mesh is secured on all sides, permanently excluding birds and other wildlife.

This innovative system is designed specifically to keep all creatures from getting under solar arrays, protecting the roof, wiring and equipment from their damage. This non-penetrating system is fast and easy to install, and can be removed for service.

The wire mesh is supplied in rolls. The preferred technique is to cut it into five-foot lengths and straighten, before getting onto the roof. Then, using a 2 x 4, bend up the bottom one-inch to about 30 degrees. This kick-out helps to lock the mesh firmly in place.

Features:

- Plastic clips are UV-stable, won't scratch panels
- Clips recommended every 18 inches,
- The lips bind the mesh to the panels without drilling holes or damaging the system
- Nearly invisible from the ground
- Tin snips and other basic tools required for installation

Solar Panel Kits

We provide clip-only kits, and complete kits with the wire mesh in rolls.
